DALIcontrol™

Schematic

Floor Control Schematic

Notes:

- The controller manages up to two DALI networks. The controller includes scheduling, digital inputs, digital outputs and an RJ45 Ethernet network socket for computer monitoring and control.
- Inputs on the controller can be used for wallplates, sensors and interfacing to security and access control panels, etc.
- Each DALI network requires a DALI power supply and a DALI interface.
- The controller manages a DALI group based on inputs from standard switches and sensors.
