Installation

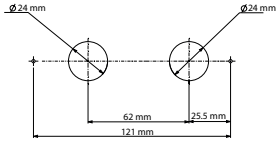

NOTICE

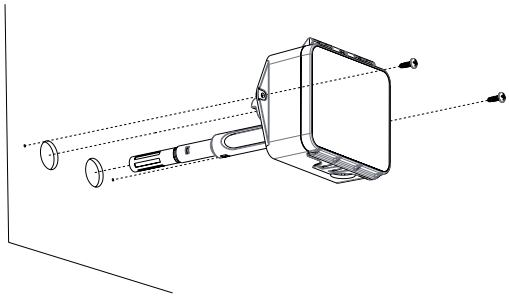

IMPROPER PLACEMENT

- If the SCD2 is installed on the supply-air side, install the sensor in a well-mixed airstream and maintain at least 8 ft (2.5 m) or 3 duct diameters (3D), whichever is greater, downstream of fans, dampers, coils, bends, humidifiers or other airflow disturbances.

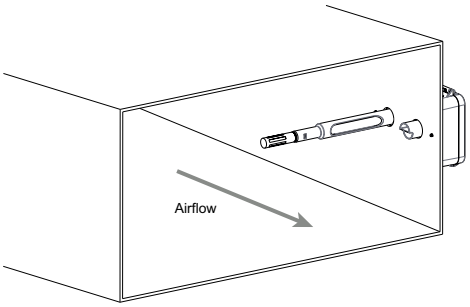

Failure to follow these instructions may result in inaccurate readings or probe condensation, causing product damage.

1. Prepare the duct for installation by drilling holes to accommodate the probe tubes for the CO_2/VOC intake. Ensure the gasket on the back is depressed to prevent leakage between the product and the duct. Do not over-tighten the screws.

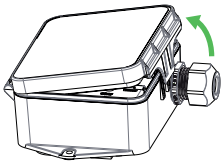

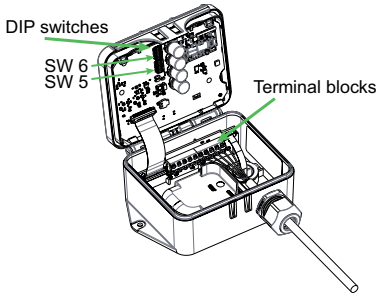

2. Ensure the probes are installed in the direction of the air flow. Install the probe in the middle of the duct and away from any restrictions to allow proper air flow.

3. Release the latch on the lid to access the DIP switches and terminal block.

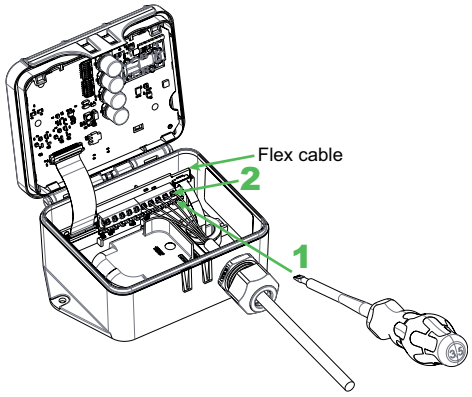

4. Wire the connections according to the diagram in the Wiring section. This device features spring terminals for screwless termination. Open the terminal point by inserting a screwdriver, then insert the wire above. Release the screwdriver to hold the wire in place. Details on wiring and configuration are contained in the next sections of this document.

NOTICE

MISSING TEMPERATURE & HUMIDITY READINGS

- Ensure flex cable is in place after wiring.

Failure to follow these instructions can result in no temperature or humidity readings.

PRODUCT DAMAGE DUE TO ELECTRO-STATIC DISCHARGE

Circuit boards and components can be damaged by static electricity or electro-static discharge (ESD). Observe the following electro-static precautions when handling this product and cables and components connected to the product.

- Keep static-producing material such as plastic, upholstery, carpeting, etc. out of the immediate work area.
- Store the product in ESD-protective packaging when it is not installed in the panel
- When handling the product or a conductive cable/ESD-sensitive component connected to the product, wear a conductive wrist strap connected to ground through a minimum of 1 MΩ resistance
- Do not touch exposed conductors and component leads with skin or clothing.

Failure to follow these instructions can result in equipment damage.

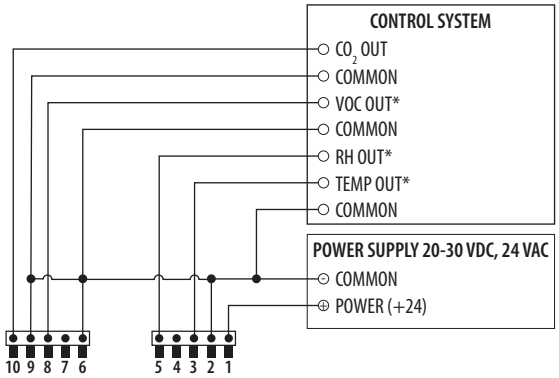

NOTICE

INACCURATE READINGS

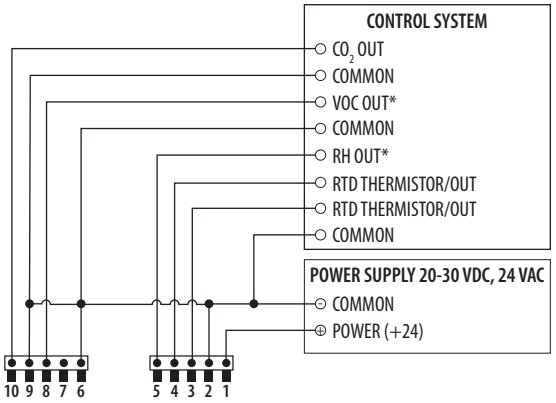

- Do not run wiring in the same conduit as AC power wiring. Close proximity to AC power may influence accuracy.

Failure to follow these instructions can result in reduced accuracy.

CO_2 Sensor Calibration

There are two methods for CO_2 calibration available: 400 ppm baseline calibration and automatic baseline calibration (ABC).

400 ppm Baseline Calibration

400 ppm baseline calibration allows the sensor to be set at 400 ppm. Push and hold the calibration button for 3 to 5 seconds. The LED will flash green. Once the button is released, calibration is complete and the LED switches off.

Automatic Baseline Calibration (ABC)

The ABC mode addresses the 400 ppm calibration. It allows turning on or off a background correction/recovery mode that will minimize any calibration error that has been caused by shock during handling and transportation or is caused by a long term shift in measurement. The ABC algorithm constantly keeps track of the sensor's lowest reading over a preconfigured time interval and slowly corrects for any long-term drift detected as compared to the expected fresh air value of 400 ppm. After initial startup, it is expected that the sensor reaches specified accuracy after 7 to 21 days.
