Lead Time Guide

Updated Monthly
Published 11/03/26
For November 2026

The lead times in this file are provided for informational purposes only and should not be relied upon for actual orders. These lead times are assigned on the release date of the file, updated monthly. For the most up-to-date information and lead times, please contact your distributor.

All lead times are indicated in weeks.

We have added color coding to highlight all updates.

Orange indicates extended lead times.

Green indicates reduced lead times.

Both colors clearly reflect updates made to this document, ensuring accuracy and transparency. Please note that holidays may result in longer lead times.
Additionally, special enclosures or accessories may incur additional lead times.

Where applicable, note the difference between made-to-order and made-to-stock offerings:

- Made-to-stock indicates products that are typically SKU based and stocked in our distribution centers at the time of this publication.
  - » Products with a lead time in the 'made-to-stock' column are temporarily out of stock and therefore have an associated lead time.
- Made-to-order products are custom built per order.
  - » Lead times are based on release to manufacturing.

Again, the lead times indicated herein are approximate lead times and are for pre-planning only and therefore they may not be accurate at the time an order is placed.

Disclaimer: The lead times in this document are for informational purposes only and are subject to change without notice.
More accurate lead times are available at the time an order is placed.
For the most up-to-date information, please contact your distributor.
