Take-back Options for End-of-Life Household WEEE and Portable Batteries

The table below provides an overview of take-back solutions available for Household WEEE (Waste Electrical and Electronic Equipment) and portable batteries at their end-of-life. These solutions are offered across different countries to ensure responsible recycling and compliance with Schneider Electric's Extended Producer Responsibility obligations.

Your product is considered a **household WEEE** if it is electrical or electronic equipment intended for use in private homes and requires electricity or electromagnetic fields to function. This includes Schneider Electric items found in private homes such as light switches, dimmers, socket outlets, power strips, timers and programmable switches, smart home controllers, room thermostats, home energy monitors etc.. When your product reaches end of life, please refer to the below list to find your best take-back option based on your country.

Your product is considered a **portable battery** if it is a sealed battery weighing 5 kg or less, not designed for industrial use, and not an electric vehicle, LMT (Light Means of Transport), or SLI (Starting, Lighting, and Ignition) battery. Common examples include AA, AAA, C, D, 9V batteries, button cells, and similar formats, whether rechargeable or non-rechargeable. When your batteries reach end of life, please refer to the below list to find your best take-back option based on your country.

Should you need further support, please reach out to our customer support experts using the following link: https://www.se.com/ww/en/work/support/.
