UK DECLARATION OF CONFORMITY

	PowerLogic A125 devices detect the light of an arc flash with connected light sensors and will send the tripping information to a switching device to interrupt the energy source. The PowerLogic A125 is a stand alone device, which provides a compact solution when the application does not require overcurrent measurement or when the overcurrent information is available from the incomer protection relay or any other arc protection unit (VAM 4C). It is possible to connect four arc sensors of the VA1DA or VA1EH type to the PowerLogic A125 unit.

Annex : Applied Designated British Standards

PowerLogic A125, Arc Flash Detection Unit

Any commercial reference with the following construction:

Commercial name(s)	Commercial reference(s)	UKCA marking initial application date	Applicable BS standards
PowerLogic A125 Arc Flash detection unit
